

Energy storage

STORE-HEAT

Heat storage materials

Ongoing

Compare thermal storage materials on a conceptual test bench.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym

STORE-HEAT

Launch year

2022

Duration

30 months

Total budget

1.5 MMAD

Hosting platform

Storage testing platform

Contact

Project coordination — contact@iresen.ma

Consortium

Academic research

Engineering and testing

Technology partner

Scientific objectives

- Characterise storage-system performance and ageing.
- Test different charge and discharge cycles.
- Compare control strategies across energy uses.
