

Green hydrogen

H2-FLEX

Photovoltaic-coupled electrolysis

Ongoing

Model an electrolyser powered by variable solar generation.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym

H2-FLEX

Launch year

2023

Duration

18 months

Total budget

4 MMAD

Hosting platform

Hydrogen experimentation platform

Contact

Project coordination — contact@iresen.ma

Consortium

Academic research

Engineering and testing

Technology partner

Scientific objectives

- Characterise renewable hydrogen production parameters.
- Compare electricity, water and storage integration conditions.
- Assess system performance and operating constraints.
