
Energy storage

BAT-CYCLE

Stationary battery ageing

Completed

Analyse charging cycles to compare storage strategies.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym

BAT-CYCLE

Launch year

2024

Duration

30 months

Total budget

1 MMAD

Hosting platform

Storage testing platform

Contact

Project coordination — contact@iresen.ma

Consortium

Academic research

Engineering and testing

Technology partner

Scientific objectives

- Characterise storage-system performance and ageing.
- Test different charge and discharge cycles.
- Compare control strategies across energy uses.
