Solar thermal

SOL-THERM

Solar loop and thermal storage

Ongoing

Study a solar heat loop with storage for a steady supply.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym
SOL-THERM

Launch year
2022

Duration
24 months

Total budget
1 MMAD

Hosting platform
Solar thermal testing platform

Consortium

Atlas Lab · Solis R&D · Nova Tech

Scientific objectives

- Characterise solar capture and heat storage.
- Compare performance across load profiles and climatic conditions.
- Assess the stability of energy supply and opportunities for optimisation.
