Green hydrogen

H2-WATER

Hydrogen water management

Ongoing

Compare water supply and reuse scenarios for electrolysis.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym
H2-WATER

Launch year
2024

Duration
24 months

Total budget
3.5 MMAD

Hosting platform
Hydrogen experimentation platform

Consortium

Atlas Lab | Solis R&D | Nova Tech

Scientific objectives

- Characterise renewable hydrogen production parameters.
- Compare electricity, water and storage integration conditions.
- Assess system performance and operating constraints.
