Solar thermal

THERM-IND

Solar heat for a pilot process

Completed

Study solar heat in a simulated industrial process.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym
THERM-IND

Launch year
2022

Duration
18 months

Total budget
2.5 MMAD

Hosting platform
Solar thermal testing platform

Consortium

Atlas Lab | Solis R&D | Nova Tech

Scientific objectives

- Characterise solar capture and heat storage.
- Compare performance across load profiles and climatic conditions.
- Assess the stability of energy supply and opportunities for optimisation.
