Green hydrogen

H2-SENSE

Hydrogen system monitoring

Ongoing

Study a sensor architecture for a simulated hydrogen system.

The approach combines modelling, test preparation and measurement analysis. Results from the different configurations will be compared using project-specific indicators to document operating limits and opportunities for improvement.

Acronym
H2-SENSE

Launch year
2025

Duration
18 months

Total budget
3 MMAD

Hosting platform
Hydrogen experimentation platform

Consortium

Atlas Lab | Solis R&D | Nova Tech

Scientific objectives

- Characterise renewable hydrogen production parameters.
- Compare electricity, water and storage integration conditions.
- Assess system performance and operating constraints.
